Wireless network for Mac OSX at KABK

Before you begin

The following instruction is supported by the KABK and has been tested to be working. However, we offer this manual to you as an extra service. In case you have a configuration or earlier version than OSX 10.7 and you have problems establishing a connection we strongly advise you to update to the latest version of OSX, due to Apple support discontinuity for versions older than OSX 10.7.

Prerequisites

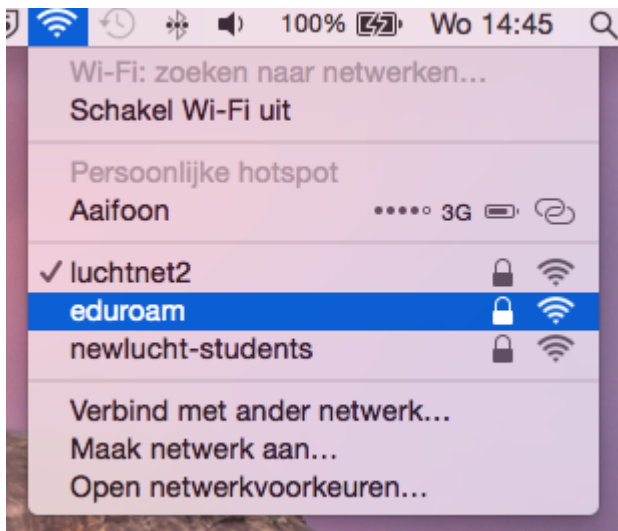

In order to make a successful network connection, make sure that you have all the latest updates for Mac OSX installed. This manual applies to OSX version 10.7 and higher. There is no use in trying to follow this manual using earlier versions. You can check what version your system is in the "Apple" menu under "About this Mac".

Wireless profile installation

Step 1

Make sure your **Airport is turned on**.

Connect to the **eduroam** network.

Step 2

A pop up window will appear.

!!! For both students and employees, enter your [userid@kabk.nl](mailto:user@kabk.nl) or [userid@student.kabk.nl](mailto:user@student.kabk.nl) and your **password**.

Click join.
